Dear Hiring Manager,

I am writing to express my interest in the DevOps Engineer position at your organization. As a DevOps Engineer currently building and scaling production infrastructure at SproutsAI, a US-based startup, I have hands-on experience architecting CI/CD pipelines, managing multi-cloud environments across AWS, Azure, and GCP, and building observability platforms that directly improve deployment speed, system reliability, and operational efficiency. I am excited about the opportunity to bring this same impact to your team.

In my current role, I designed end-to-end CI/CD pipelines using Jenkins that reduced deployment time by 80% and enabled over 10 daily production releases with automated testing, security scanning, and rollback safeguards built in. I led a zero-downtime migration of our entire application infrastructure from Azure to GCP, moving 500GB+ of databases and container workloads using a blue-green deployment strategy. I also built a monitoring and alerting stack with Prometheus, Grafana, and the ELK Stack that reduced MTTR by 60% and helped prevent over 15 potential production outages through proactive monitoring. Beyond infrastructure, I containerized 20+ production microservices with Docker, implemented auto-scaling and load balancing, and wrote Python automation that cut manual operational work by 85%.

What sets me apart is a complementary full-stack and applied AI engineering background — I have built production applications with React, Next.js, and Node.js, and developed LLM-powered tools using the OpenAI API. This gives me a systems-level understanding of the applications I deploy and monitor, not just the infrastructure underneath them, which helps me troubleshoot faster and design pipelines that fit how development teams actually work. I hold certifications including the ServiceNow Certified System Administrator (CSA) and Certified Application Developer (CAD), and I am comfortable working across Terraform, Ansible, Kubernetes, Docker, and the broader DevOps toolchain. I am also open to night-shift operations and 24/7 on-call rotations to support production reliability.

I would welcome the opportunity to discuss how my experience in CI/CD automation, multi-cloud infrastructure, and observability engineering can contribute to your team's goals. Thank you for considering my application — I look forward to the possibility of speaking with you further.

Sincerely,

P. Sandeep Kalyan
