PROFESSIONAL SUMMARY

DevOps Engineer with hands-on, production experience architecting CI/CD pipelines, multi-cloud infrastructure (AWS, Azure, GCP), and observability platforms that cut deployment time by up to 80%, reduce MTTR by 60%, and drive measurable cost savings at scale. Brings a complementary full-stack and applied AI engineering background — building production React/Next.js/Node.js applications and LLM-powered tools — that translates into a sharper, systems-level understanding of the applications being deployed, scaled, and monitored. Focused on applying automation, infrastructure-as-code, and reliability engineering practices to help high-performing engineering teams ship faster and more reliably.

PROFESSIONAL EXPERIENCE

DevOps Engineer — SproutsAI (US-based Startup) *Apr 2025 – Present*
Remote

- Designed and implemented end-to-end CI/CD pipelines using Jenkins, reducing deployment time by 80% and enabling 10+ daily production releases with automated testing, security scanning, and rollback mechanisms
- Managed multi-cloud infrastructure across GCP and Azure using configuration management tools and automation scripts, maintaining 50+ version-controlled cloud resources
- Led a zero-downtime migration of the entire application infrastructure from Azure to GCP, moving 500GB+ of databases, container workloads, and network configurations using a blue-green deployment strategy
- Built a monitoring and alerting stack using Prometheus, Grafana, and the ELK Stack, reducing MTTR by 60% and preventing 15+ potential production outages through proactive monitoring
- Containerized microservice applications with Docker, implementing auto-scaling, load balancing, and health monitoring for 20+ production services
- Integrated automated QA testing (unit, integration, security, performance) into CI/CD pipelines, achieving zero production defects while maintaining 99.9% system uptime
- Developed Python automation scripts for log analysis, backup verification, and system health checks, cutting manual operational effort by 85%
- Administered Azure (ACR, Key Vault, VMs, Storage) and AWS (EC2, S3, Route 53, Load Balancers, VPC, IAM) resources, optimizing cloud costs by 30% through right-sizing and scheduling
- Established centralized container image management on Azure Container Registry with retention policies, security scanning, and version control
- Configured declarative Jenkins pipelines with automated builds, tests, and deployments, including stage gates and approval workflows

Full Stack AI Engineer & DevOps Engineer — SproutsAI (US-based Startup) *Apr 2025 – Present*
Remote

- Developed and deployed cloud-native applications using React, Next.js, Node.js, and Express.js on containerized infrastructure, with CI/CD pipelines for automated builds and deployments
- Designed and deployed automated release strategies, including blue-green deployments, to minimize downtime during production rollouts
- Built Grafana monitoring dashboards and integrated APM with distributed tracing to identify bottlenecks and optimize system performance
- Implemented an enterprise-grade RBAC system with secure authentication, enforcing least-privilege access controls across cloud platforms
- Automated database backup and disaster recovery procedures, including restoration testing, to meet RPO/RTO targets for production databases
- Partnered with development teams to optimize performance and enforce security best practices across production services

Software Developer & DevOps Engineer — Techin IT *Jun 2024 – Dec 2024*

- Developed and maintained full-stack web applications using React, Node.js, and Express.js, delivering new features and bug fixes in collaboration with a cross-functional team
- Built and maintained REST APIs with PostgreSQL/MongoDB backends, applying code reviews and Git-based workflows to improve code quality and release consistency
- Set up CI/CD pipelines to automate build, test, and deployment stages, replacing manual releases and reducing deployment effort
- Containerized applications with Docker and deployed them to cloud environments (AWS), managing environment configuration and NGINX reverse proxy setups
- Implemented basic monitoring, logging, and alerting to track application health and speed up troubleshooting of production issues
- Wrote Bash and Python scripts to automate routine operational tasks such as backups, log cleanup, and environment provisioning

EDUCATION

Vishnu Institute of Technology, Bhimavaram, India *Dec 2023 – Apr 2026*
Bachelor of Technology in Information Technology — GPA: 8.89 / 10
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems, Software Engineering, Cloud Computing, System Administration

Smt. B. Seetha Polytechnic, Bhimavaram, India *Jun 2020 – Jul 2023*
Diploma in Computer Engineering
Relevant Coursework: Programming Fundamentals (C, C++, Python), Computer Networks, Operating Systems (Linux/Windows), Database Management, System Administration

PROJECTS

Jenkins CI/CD Pipeline Automation — DevOps *Personal Project*

- Built and maintained automated Jenkins CI/CD pipelines driving 20+ projects from commit to production, cutting deployment time from hours to minutes
- Automated Docker image builds and Kubernetes deployments across multi-environment (dev/stage/prod) setups on Azure, with webhook-triggered builds on every commit
- Implemented secrets management and tested rollback procedures for every release, eliminating manual, error-prone deployment steps
- Designed pipeline-as-code from the outset, enabling consistent, version-controlled, and repeatable deployments

Observability Stack — Grafana & Prometheus Monitoring — DevOps *Personal Project*

- Deployed a Grafana and Prometheus monitoring stack for centralized logging, real-time metrics dashboards, and automated alert routing via Google Chat
- Configured Prometheus scrape targets across distributed services and built custom Grafana dashboards aligned to on-call workflows
- Tuned alert thresholds with Alertmanager to reduce alert fatigue while preserving fast incident detection
- Delivered full-stack observability (logs, metrics, alerts) for production-style services running on Docker and Linux

SensAI — AI Career Coach — Full-Stack + AI *Personal Project*

- Built an LLM-powered career coaching platform using React, Node.js, and the OpenAI API, delivering personalized career guidance, resume feedback, and skill-gap analysis
- Engineered context-aware prompt pipelines to maintain conversational relevance while safeguarding user data across sessions
- Implemented streaming LLM responses to reduce perceived latency and improve the real-time chat experience
- Applied prompt-engineering best practices to ensure consistent, high-quality AI outputs across varied user inputs, demonstrating end-to-end LLM application design

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, Route 53, ALB/NLB, IAM, CloudWatch, Lambda, RDS, Auto Scaling Groups); Azure (VMs, Container Registry, Key Vault, Storage Accounts, Virtual Networks); GCP
Containerization & Orchestration: Docker, Docker Compose, Kubernetes, Helm, Container Registry Management
CI/CD, Version Control & GitOps: Jenkins, GitHub Actions, GitLab CI, ArgoCD, Azure DevOps Pipelines, Git, GitHub, GitLab
Infrastructure as Code: Terraform, Ansible, YAML
Monitoring & Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), CloudWatch, Azure Monitor
Scripting & Automation: Python, Bash, Shell Scripting
Operating Systems & Networking: Linux (Ubuntu), Windows Server, VPC, Subnets, Security Groups, Load Balancing, DNS, VPN
Databases: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, RabbitMQ
Security: SSL/TLS, Key Management, Secret Management, RBAC
Web Servers & Deployment: NGINX, Reverse Proxy Configuration, Blue-Green Deployment, Rolling Deployment
Full-Stack Development: React, Next.js, Node.js, Express.js, TypeScript, REST APIs, GraphQL, WebSockets, Tailwind CSS
AI & LLM Engineering: LLMs, Prompt Engineering, OpenAI API, RAG (Retrieval-Augmented Generation), Vector Search / Embeddings, AWS Textract, Resume Parsing & OCR
Methodologies: Agile/Scrum, DevOps Best Practices, GitOps, CI/CD

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA) — ServiceNow Learning, Jul 2025
- ServiceNow Certified Application Developer (CAD) — ServiceNow Learning, Jul 2025
- SQL for Data Science — Coursera, Jul 2024
- JavaScript Essentials — Scaler Academy, Jul 2024

LEADERSHIP & ACHIEVEMENTS

Web Development Lead — DO IT Club, Vishnu Institute of Technology

- Led a team of 6 developers in deploying a cloud-based departmental coordination tool on AWS, implementing automated CI/CD pipelines and infrastructure monitoring
- Organized 3 technical workshops on DevOps practices, Docker containerization, and cloud infrastructure management
- Established Git workflow standards, code review processes, and automated testing practices, reducing deployment failures by 40%

Top 5 Finalist — Internal Hackathon, Vishnu Institute of Technology

- Developed a cloud-native solution with an automated deployment pipeline and infrastructure monitoring using a containerized microservices architecture
- Implemented a complete DevOps workflow from code commit to production deployment within a 24-hour constraint

ADDITIONAL INFORMATION

- **Availability:** Open to night shift operations and 24/7 on-call rotations for production support
- **Strengths:** Strong troubleshooting skills, infrastructure monitoring expertise, automation mindset, collaborative team player
- **Learning Focus:** Currently expanding knowledge in Kubernetes advanced patterns, service mesh (Istio), and observability practices
